POINT of Robot Performance

At the beginning of a new school term, our Pepper robot is intelligent enough to give information and guide or direct the school kids, parents, visitors as well as teachers to certain places at the school like a principal room, canteen, field, library or perhaps toilets. On top of that, our Pepper robot will ensure people to wear facial masks, apply hand sanitizer, have body temperature checks so that all people entering the school are healthy.

I'll show you these virtual schools. We will show you around.

Team Introduction

[Problem](1) Many first-time visitors to the school do not have a good understanding of the school's structure. (2) Because of the spread of the new coronavirus, there is a risk of infection through contact with people and objects. (3) If people are assigned to guide, employees' time will be lost and their health will deteriorate.

[solution](1) For those who do not understand the structure of the campus, Pepper will actually move around and give directions. (2) Record the names, faces, arrival times, and purposes of visitors. (3) By using Pepper as a robot, it will continue to work as long as it has a charge.
